PROFESSIONAL SUMMARY

Senior iOS Developer with 10+ years of experience and 25+ shipped applications across insurance, healthcare, fintech, telecommunications, and consumer products. Currently Senior Engineer, AI Champion, and Career Coach at Endava, leading development of high-impact mobile applications and mentoring iOS developers. Expert in Swift, SwiftUI, UIKit, and modern architecture patterns (MVVM, Clean Architecture), with a proven record of stabilising complex legacy codebases and delivering App Store-compliant products aligned with Apple design guidelines. Holds a Specialist degree in Information Technology (GPA 9.63/10).

TECHNICAL SKILLS

Languages: Swift, Objective-C

UI Frameworks: SwiftUI, UIKit, Auto Layout, Core Animation

Architecture: MVVM, Clean Architecture, VIPER/VIP, Combine, RxSwift

Data & Networking: REST API, GraphQL, WebSocket, Core Data, Firebase, CloudKit, SQLite

Apple Frameworks: HealthKit, Core Location, MapKit, Core Bluetooth, Push Notifications (APNs), Core ML, ARKit

Testing & Quality: XCTest, Unit / UI / Integration Testing, TDD, Code Review, Instruments profiling

Tools & CI/CD: Xcode, Git, Fastlane, GitHub Actions, Jenkins, Azure DevOps, CocoaPods, Swift Package Manager, TestFlight

Security & Payments: OAuth 2.0, Auth0, Keychain, Stripe SDK, HIPAA-compliant data handling

AI Tooling: Claude Code, multi-agent orchestration, AI-assisted development, LLM-driven code generation

Ways of Working: Agile / Scrum, Jira, Confluence, cross-functional collaboration, mentoring

PROFESSIONAL EXPERIENCE

Senior iOS Developer (Senior Engineer)

Endava — Belgrade, Serbia | January 2022 – Present

- Lead development of multiple high-impact mobile applications for insurance and telecommunications clients, owning app lifecycles from concept to production.
- Apply modern architectural patterns (MVVM, Clean Architecture) and technologies such as SwiftUI, UIKit, and Combine to ensure performance, scalability, and maintainability.
- As **AI Champion**, drive AI project integration and monitoring, mentor developers in AI implementation, and support delivery automation.
- As **Career Coach** (since April 2024), mentor junior iOS developers through structured growth plans, 1:1 sessions, workshops, and knowledge-sharing sessions.
- Collaborate with cross-functional teams in an agile environment, contributing to smooth and predictable project delivery.

Senior iOS Developer

DarwinDigital | November 2019 – January 2022

- Built healthcare technology applications with secure, HIPAA-compliant data handling, leveraging advanced mobile capabilities and emerging technologies.
- Improved product stability and user experience by refactoring legacy codebases and optimising app performance and memory usage.
- Delivered user-centric solutions in collaboration with research teams, data scientists, and backend developers.

iOS Developer (Junior to Mid-level)

Comit International | July 2015 – November 2019

- Developed applications across social networking, logistics, on-demand services, and betting, using Objective-C, Swift, UIKit, and Firebase.
- Adapted to diverse codebases — from clean, well-structured systems to complex inherited code — bringing clarity and stability to legacy projects.
- Progressed from junior to mid-level roles through reliability, fast learning, and effective communication.

PROJECT HIGHLIGHTS

Schüco SmartTouch — Freelance (2024–2025)

Revived and stabilised an inherited smart-home application for secure door communication with fingerprint access and real-time security monitoring; improved performance and maintainability of a complex legacy codebase. (*Swift, Core Bluetooth, Touch ID, Push Notifications*)

DXP: Hybrid Insurance Platform — Endava (2024–Present)

Developed a scalable hybrid solution for a major insurance provider; key role in mobile and cross-platform implementation, ensuring a smooth user experience across devices. (*Swift, SwiftUI, Combine, CI/CD*)

Ding: Global Mobile Recharge App — Endava (2023–2024)

Delivered a user-friendly international recharge solution with secure payments and user account management, adapting to dynamic business logic and evolving requirements. (*Swift, Stripe SDK, Core Data*)

Health Monitoring Applications — DarwinDigital (2019–2022)

Contributed to AI-supported medical applications for pain detection in infants and elderly patients, ensuring stability, usability, and compliance in sensitive healthcare environments. (*Swift, HealthKit, Charts, HIPAA*)

Footballerista: Social Platform for Athletes — Comit International (2017–2019)

Helped build a sports-focused social networking app showcasing player profiles, highlights, and interactions, with a scalable architecture for a niche athletic audience. (*Swift, Firebase, Core Data*)

Various Consumer & Business Apps — Comit International (2015–2019)

Delivered solutions spanning social networking, logistics, on-demand services, and gamified systems; gained experience with fast iterations, UI customisation, and evolving project scopes.

AI-ASSISTED PERSONAL PROJECTS

Independent products built end-to-end with Claude Code and a custom multi-agent orchestration framework.

The Hive — Multi-Agent Development Orchestration Framework (2026)

Designed and built a multi-agent orchestration protocol for Claude Code: an architect/delegate/worker agent hierarchy, a frozen JSON Schema contract with cross-platform type generation (Swift, Kotlin, TypeScript, Python), parallel task dispatch with disjoint file ownership, automated build-and-test gates, and deterministic conflict resolution — used to deliver the projects below end-to-end. (*Claude Code, Python, JSON Schema, codegen*)

Bug Corp Duel — Native iOS P2P Card Game (2026)

Built a complete Yu-Gi-Oh-style card duel game with an IT-office parody theme: deterministic seeded game engine with a 100-card catalogue and reaction/trap windows, serverless peer-to-peer multiplayer, and simulation-driven balance tuning across 400 automated matches; 100+ unit and integration tests under Swift 6 strict concurrency. (*SwiftUI, SpriteKit, MultipeerConnectivity, Network.framework, Swift Package Manager, XcodeGen*)

BeamBike — E-Bike Sharing Platform MVP (2026)

Built a full-stack mobility MVP: Node.js/TypeScript backend (PostgreSQL, Redis, REST + realtime WebSocket), React admin dashboard, native iOS and Android apps, IoT device simulator, live geofenced maps, and i18n across 7 languages including full RTL support. (*SwiftUI, Kotlin / Jetpack Compose, Node.js, PostgreSQL, Redis, WebSocket, MapLibre*)

Additional AI-assisted builds (2026)

Personal time-optimisation platform (PWA, REST API, native mobile), football-manager simulation, news portal, restaurant platform, and e-commerce storefront — each delivered through the same orchestrated multi-agent workflow.

EDUCATION

Specialist of Applied Studies in Electrical Engineering and Computing — Information Technology

VPTS (College of Applied Sciences) — Užice, Serbia | 2008–2014 | GPA: 9.63/10

LANGUAGES

Serbian — native | English — full professional proficiency
